```java
public class ScheduleFile {

    private String courseName;
    private String professorName;
    private String days;
    private String startTime;
    private String endTime;

    public ScheduleFile(String courseName, String professorName, String days,
    String startTime, String endTime) {
        this.courseName = courseName;
        this.professorName = professorName;
        this.days = days;
        this.startTime = startTime;
        this.endTime = endTime;
    }

    // Getters
    public String getCourseName() {
        return courseName;
    }

    public String getProfessorName() {
        return professorName;
    }

    public String getDays() {
        return days;
    }

    public String getStartTime() {
        return startTime;
    }

    public String getEndTime() {
        return endTime;
    }

    // toString override
    @Override
    public String toString() {
        return "ScheduleFile [courseName=" + courseName + ", professorName=" +
professorName + ", days=" + days
                + ", startTime=" + startTime + ", endTime=" + endTime + "]";
    }

}
```
